DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 7, the prior art and Borie et al (US Patent No 4096566) and Cedolin et al (US Patent No 4366535) and Barcaroli et al (US Patent No 4356547) either alone or in combination failed to teach a method of inserting a communications module into a wireless communication system comprising at least one control module and a plurality of first communications modules, the method comprising: causing a second communications module, which is to be inserted into the system, to transmit a first signal in a set-up mode; and if said first signal is detected by at least two said modules capable of communicating directly with each other, causing said second communications module, by means of a second signal from at least one said control module updating the address of one of said modules which detected said first signal, to be installed to communicate directly, when in said communication mode, with two said modules which detected said first signal, including the module whose address was updated by said second signal. Furthermore, the prior art failed to teach the steps of causing a second communications module to transmit a third signal in a set-up mode; if said third signal is detected by said first communications module and said control module which received said first message, causing, by means of a fourth signal from said control module, said second communications module to communicate directly with the first communications module and said control module, and said first communications module to communicate directly with said second communications module, in said communication mode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Van Gasteren et al US Patent No 6243771 B1 discloses a communication channel that is operated in a mixed master/slave subscriber by a dynamical closing/opening operation.

Kimishima US Patent No 5978846 discloses a communication path establishment control module of a transmitting task that transmits a communication path establishment request message to a communication path establishment control module of a receiving task.

Brickell US patent No 6240478 discloses a method and apparatus for addressing a plurality of interconnected electronic modules.
